THE MERIDIAN TECHNOLOGY REVIEW

June 2, 2025 | By Daniel Whitcombe, Senior Editor

The Engineer Who Made Global Databases Feel Local

When Priya Raman joined Halcyon Cloud Services in 2019, cross-continent database reads routinely took over 300 milliseconds. Her Fennel protocol cut that to under 40 milliseconds without giving up consistency guarantees, and it is now used by at least six major cloud providers.

"Raman's insight was that most applications can tolerate a bounded, precisely measured amount of staleness," said Dr. Kwame Osei, a professor at Lakeshore University. "She turned that into a protocol people could actually deploy."

Raman now leads engineering at Tessellate Labs, where she is applying the same ideas to vector search.
