Re: O-1A petition for Dr. Priya Raman

I am a Professor of Computer Science at Lakeshore University. I have no financial relationship with Tessellate Labs.

Dr. Raman's Fennel protocol is a contribution of major significance to the field of distributed systems. Before Fennel, operators chose between strong consistency with high cross-region latency and weak consistency with unpredictable anomalies. Fennel introduced bounded-staleness reads with a formally verified upper bound, and its open-source implementation has been adopted by Halcyon Cloud, Arcadia Compute, Northwind Data and at least three other providers.

The Fennel paper has been cited 412 times, which places it in the top 1 percent of systems papers published in 2022. Independent groups have built on it in at least 37 follow-up papers.

Sincerely, Prof. Kwame Osei
